 **Nono**
I'm your online assistant.

Michael Carter contested a claim denial for an accident on **10/31/2025** under policy **POL-4589723-TX**, asserting he added his son, **Thomas Carter**, as a driver on **10/01/2025**. A technical issue prevented processing. **Contract Management** recommends validating coverage from **10/01/2025** and accepting the claim. **Acknowledgment** attached as proof.

Claim Expert Review - C0003 - CARTER MICHAEL

Automated in the background

AI Analysis Results

AI Analysis Status

Not Eligible

AI Verification Details

The driver identity is inconsistent as the report lists 'Michael Carter' while the license lists 'Thomas Carter'. The contract number matches between the report and the contract. The accident occurred within the contract's validity period. The vehicle brand and model match between the report and the contract. The vehicle plate matches between the report and the contract. Due to the driver identity inconsistency, the overall status is 'NON_RECEIVABLE'.

Subject: Update on Your Claim UXG-CL-0008

Dear Mr. Michael Carter,

I hope this message finds you well. We have completed the review of your recent claim, dated October 31, 2025, under Policy Number POL-4589723-TX with Client Reference Number C0003.

We regret to inform you that, at this time, your claim UXG-CL-0008 cannot be processed for coverage. The reason for this decision is an inconsistency in the driver's identity. Specifically, the accident report lists the driver as 'Michael Carter,' while the driver's license provided lists 'Thomas Carter.' This discrepancy has resulted in the claim being marked as 'NON_RECEIVABLE' under the current policy terms.

We understand that this may be disappointing news, and we are here to assist you further. If you believe there has been an error or if you have previously submitted an update request, we kindly ask you to provide any supporting documentation that may help clarify the situation.

Please feel free to reach out to us with any questions or additional information you may have. We are committed to resolving this matter with you.

Thank you for your understanding and cooperation.

Kind regards,

Uxopian Claims Department

What do these demos have in common?

Common Point #1

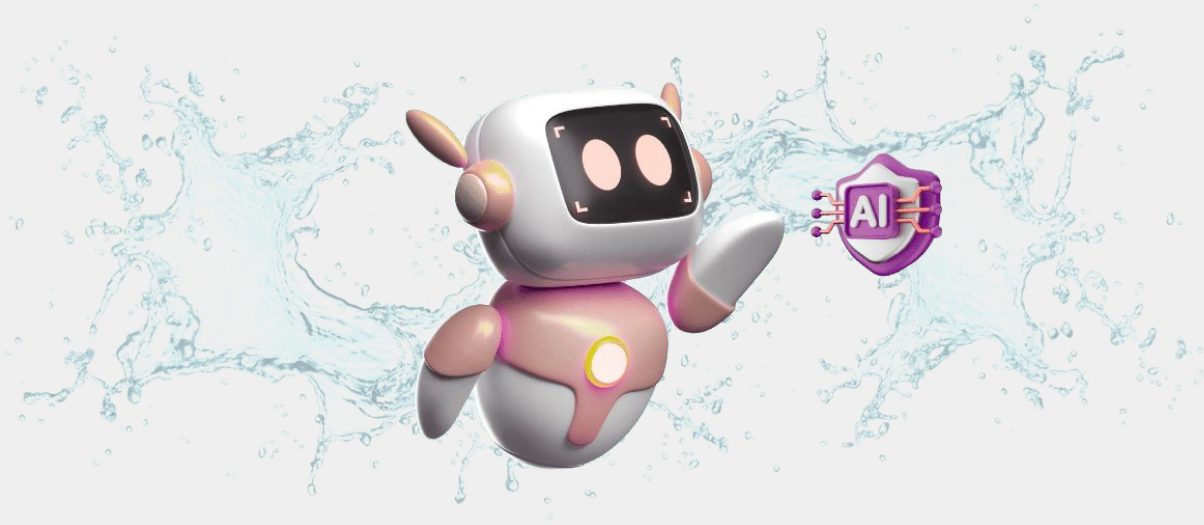

They provide **the right information at the right time, in the right place.**

They **help worker** stay **focused, and productive**, they remove the noise and constraints of digital workspaces.

They **reduce** the **execution time** of business **processes.**

They **limit** the **risk** of error

Common Point #2

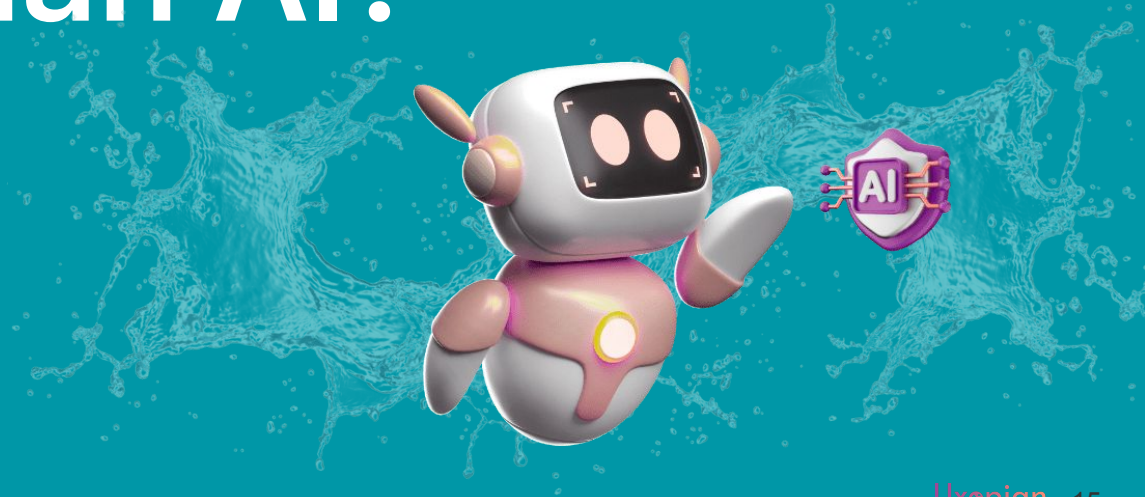

**They use
Uxopian AI !**

What is Uxopian AI ?

Your go-to engine

for integrating AI into your content and
workflow systems - quickly, safely
and iteratively. 🚀

Why Uxopian AI?

AI Agnostic

- There is no “one model to fit them all”: improving a business process with AI can require multiple models to operate at cost efficiency.
- Some organisations want self-managed inference - no cloud.
- Technology evolves at the pace of light.

⇒ **Don't bind yourself to a single AI provider.**

Agility by Design

The screenshot shows a modal window titled "Edit Prompt" with a close button (X) in the top right corner. The form contains the following fields:

- Prompt ID:** A text field containing "uxopian.claim_demo.rejection_email".
- Role:** A dropdown menu currently showing "User".
- Content (template):** A large text area containing a multi-paragraph prompt template for a customer claim operator. The text includes a polite greeting, a request for an email, and a formal rejection letter template with a placeholder for a claim number and policy ID.
- Provider (optional):** A text field with the example value "ex: openai".
- Model (optional):** A text field with the example value "ex: gpt-4o".
- Temperature (optional):** A text field.
- Time Saved (seconds, optional):** A text field.

At the bottom right of the form are two buttons: "Cancel" and "Save".

- Decouple your prompts from your business application and update them without redeploy.
- Easily manage prompts characteristics (Provider and model to use, Reasoning, Multimedia, Use of tools)
- Monitor which prompts are successful with your business users

And more to come: prompts A/B testing, users targeting, dev, uat, prod versions, manage prompts by projects
